

Dear Dr. Starnes,

Thank you for your comments and for bringing your concerns to my attention. As a practicing cardiologist myself, I fully understand the critical nature of responding to urgent pages in a timely manner—our work often involves life-and-death situations.

I want to assure you that Johnson Design Homes, the contractor for this project, has been building homes on Mercer Island for over 25 years. They have extensive experience managing construction traffic on narrow roads and ensuring subcontractors park responsibly to prevent obstructions to ingress and egress, as well as avoiding damage to neighboring properties. This includes work on streets with more challenging layouts, such as those on East and West Mercer Way.

In your case, I anticipate that your corner property's location will allow you to exit your driveway and turn eastward, away from the construction site, ensuring a clear path to West Mercer Way and a quick route onto I-90 West.

Your feedback is important, and I am committed to ensuring that the construction process is as smooth and minimally disruptive as possible for all of us.

Sincerely,

Tony Chen
