Reference: Geotechnical Report, Ramaiyah Residence, Prepared by Ages Engineering, Project Number 1562-1, dated September 4, 2024

Dear Ms. Ramaiyah,

As requested we have prepared a deep subsurface investigation for the subject site. The site is located along a shared driveway extending off E. Mercer Way. Due to the relatively low height of the overhead utilities along the driveway leading to the subject site, a typical drill rig cannot be utilized. We understand a lower vehicle on tracks can be used but will require a brief driveway closure and surface protection. Currently, the neighbors are resistant to any driveway closure for any amount of time.

We understand the planned development requires deeper exploration. We are currently working on other drill rigs available to eliminate the need to affect utilities or close the driveway. It is our expectation that our recommendations will not change substantially with further exploration, and therefore site development, along with the revision of our original Geotechnical Report are progressing. A deeper site exploration will be performed as soon as logistically possible.

We trust this information is sufficient for your current needs. If you have any questions, or require additional information, please call.

Respectfully Submitted,
Ages Engineering
