## LOADING ON SOUTH HOUSE WALLS:

### NEW ROOF LOAD:

$$\text{DEAD LOAD} = 15 \text{ PSF} \times 13.5\text{ft} = 203 \text{ PLF}$$

$$\text{SNOW LOAD} = 25 \text{ PSF} \times 13.5\text{ft} = 338 \text{ PLF}$$

### NEW FLOOR LOAD:

$$\text{DEAD LOAD} = 15 \text{ PSF} \times 7\text{ft} = 105 \text{ PLF}$$

$$\text{LIVE LOAD} = 40 \text{ PSF} \times 7\text{ft} = 280 \text{ PLF}$$

### EXISTING FLOOR LOAD:

$$\text{DEAD LOAD} = 15 \text{ PSF} \times 7\text{ft} = 105 \text{ PLF}$$

$$\text{LIVE LOAD} = 40 \text{ PSF} \times 7\text{ft} = 280 \text{ PLF}$$

### NEW & EXISTING WALL DEAD LOAD:

$$\text{DEAD LOAD} = 10 \text{ PSF} \times 16\text{ft} = 160 \text{ PLF}$$

### TOTAL LOADS:

$$\text{DEAD LOAD} = 203 + 105 + 105 + 160 = \mathbf{573 \text{ PLF}}$$

$$\text{LIVE LOAD} = 280 + 280 = \mathbf{560 \text{ PLF}}$$

$$\text{SNOW LOAD} = \mathbf{338 \text{ PLF}}$$

JOB #: 24-123

## PROJECT SUMMARY AND DESIGN CRITERIA

### Background

#### Project Summary:

This is an upper floor addition on an existing single story, wood framed house for the Rankin Family on Mercer Island, WA. The structure consists of wood roof and floor trusses/joists bearing on wood framed walls, posts, and beams. The house is supported by existing concrete stem walls and shallow spread footings. This project is designed in accordance with the 2021 International Building Code along with the codes listed below and corresponding state and city/county amendments.

### Notes:

All input variables are highlighted in yellow, resources bolded, and links to resources bolded and underlined. Areas highlighted in blue are code/design checks and green - unity checks.

# HRS/ST/HTP/LSTA/LSTI/MST/MSTA/MSTC/MSTI

## Strap Ties

Straps are designed to transfer tension loads in a wide variety of applications.

**HRS** — **Heavy strap** designed for installation on the edge of 2x members. The HRS416Z installs with Strong-Drive® SDS Heavy-Duty Connector screws.

**HTP** — **Heavy tie plate** designed for installation on the side of 2x4 or larger members.

**LSTA and MSTA** — Designed for use on the edge of 2x members, with a nailing pattern that reduces the potential for splitting.

**LSTI and MSTI** — **Light and medium** straps that are suitable where pneumatic-nailing is necessary through diaphragm decking and wood chord open-web trusses.

**MST** — High-capacity strap that can be installed with either nails or bolts. Suitable for double 2x member connections or greater.

**MSTC** — High-capacity strap that utilizes a staggered nail pattern to help minimize wood splitting. Nail slots have been countersunk to provide a lower nail head profile.

**Finish:** Galvanized. Some products are available in stainless steel, ZMAX® coating or black powder coat (add PC to sku); contact Simpson Strong-Tie. See Corrosion Information, pp. 13–15.

**Installation:** Use all specified fasteners; see General Notes

**Options:** Special sizes can be made to order; contact Simpson Strong-Tie

**Codes:** See p. 12 for Code Reference Key Chart

MSTC and RPS meet code requirements for reinforcing cut members (16 gauge) at top plate and RPS at sill plate.

International Residential Code® — 2012/2015/2018 R602.6.1

International Building Code® — 2012/2015/2018 2308.9.8

(For RPS, refer to p. 303.)

# MST/MSTA/MSTC

## Strap Ties (cont.)

**Codes:** See p. 12 for Code Reference Key Chart

These products are available with additional corrosion protection. For more information, see p. 15.

**SD** Many of these products are approved for installation with Strong-Drive® SD Connector screws. See pp. 335–337 for more information.

### Floor to Floor Span Table

MST72		2½	72	(68) 0.162 x 2½	10	½	6,730	4,490	6,475	4,150	

- See pp. 260–261 for Straps and Ties General Notes.
- Install bolts or nails as specified by Designer. Bolt and nail values may not be combined.
- Allowable bolt loads are based on parallel-to-grain loading and minimum member thickness: MST – 2½".
- Splitting may be a problem with installations on lumber smaller than 3½"; either fill every nail hole with 0.148" x 1½" nails or fill every other hole with 0.162" x 2½" nails. Reduce the allowable load based on the size and quantity of fasteners used.
- Fasteners:** Nail dimensions in the table are listed diameter by length. See pp. 21–22 for fastener information.

C-C-2019 © 2019 SIMPSON STRONG-TIE COMPANY INC.

# MSTC48B3/MSTC66B3Z

## Pre-Bent Straps

The MSTC48B3 and MSTC66B3Z are pre-bent straps designed to transfer tension load from an upper-story shearwall to a beam on the story below.

**Material:** 14 gauge

**Finish:** Galvanized; contact Simpson Strong-Tie

**Codes:** See p. 12 for Code Reference Key Chart

These products are available with additional corrosion protection. For more information, see p. 15.

Model No.	Min. Wood Beam Dimension (in.)		Fasteners (in.)			Allowable Tension Loads		Code Ref.
			Beam		Studs/Post	DF/SP (160)	SPF/HF (160)	
	Width (min.)	Depth (min.)	Face	Bottom				
MSTC48B3	3	9 1/4	(12) 0.148 x 3	(4)	(38) 0.148 x 3	3,975	3,900	IBC, FL, LA
MSTC66B3Z	3 1/2	11 1/4	(14) 0.148 x 3			4,490	4,490	

- Using fewer than 38 nails in the studs/post will reduce the allowable load of the connection. To calculate a reduced allowable load, use 199 lb. per nail for DF/SP or 172 lb. per nail for HF/SPF. Minimum length of extent of reduced nails may not be less than 21" as is shown in graphic.
- Nails in studs/post shall be installed symmetrically. Nails may be installed over the entire length of the strap in the studs/post.
- The minimum 3"-wide beam may be made up of two 2x members.
- MSTC48B3 and MSTC66B3Z installed over wood structural panel sheathing up to 1/2" thick achieve 0.85 of table loads.
- PSL beam may be used in lieu of a standard-dimension lumber beam with no load reductions.
- Multiply allowable loads by 1.85 to attain an allowable load for installations where two straps have been installed with a 1 1/2" clear space between straps.
- Structural composite lumber columns have sides that show either the wide face or the edges of the lumber strands/veneers known as the narrow face. Values in the tables reflect installation into the wide face. See technical bulletin T-C-SCLCLM at [strongtie.com](http://strongtie.com) for load reductions resulting from narrow-face installations.
- Fasteners:** Nail dimensions in the table are listed diameter by length. See pp. 21-22 for fastener information.

# HDU/DTT

## Holdowns

This product is preferable to similar connectors because of (a) easier installation, (b) higher loads, (c) lower installed cost, or a combination of these features.

HDU holdowns are pre-deflected during the manufacturing process, virtually eliminating deflection under load due to material stretch. They use Strong-Drive® SDS Heavy-Duty Connector screws which install easily, reduce fastener slip and provide a greater net section when compared to bolts.

The DTT tension ties are designed for lighter-duty holddown applications on single 2x posts. The DTT1Z is installed with nails or Strong-Drive SD Connector screws and the DTT2Z installs easily with the Strong-Drive SDS Heavy-Duty Connector screws (included). The DTT1Z holdowns have been tested for use in designed shearwalls and prescriptive braced wall panels as well as prescriptive wood-deck applications (see p. 289 for deck applications).

For more information on holddown options, contact Simpson Strong-Tie.

### HDU Features:

- Uses Strong-Drive SDS Heavy-Duty Connector screws which install easily, reduce fastener slip and provide a greater net section area of the post compared to bolts
- Strong-Drive SDS Heavy-Duty Connector screws are supplied with the holdowns to ensure proper fasteners are used
- No stud bolts to countersink at openings

**Material:** See table

**Finish:** HDU — galvanized; DTT1Z and DTT2Z — ZMAX® coating; DTT2SS — stainless steel

### Installation:

- See Holddown and Tension Tie General Notes on pp. 49–50.
- The HDU requires no additional washer; the DTT requires a standard-cut washer (included with DTT2Z) be installed between the nut and the seat.
- Strong-Drive SDS Heavy-Duty Connector screws install best with a low-speed high-torque drill with a  $\frac{3}{8}$ " hex-head driver.
- Fasteners and crescent washer are included with the holdowns. For replacements, order part no. SDS25212-HDU\_ (Fill in the size needed, e.g. HDU2.)

**Codes:** See p. 12 for Code Reference Key Chart

# HDU/DTT

## Holdowns (cont.)

These products are available with additional corrosion protection. For more information, see p. 15.

**SS** For stainless-steel fasteners, see p. 21.

**SD** Many of these products are approved for installation with Strong-Drive® SD Connector screws. See pp. 335-337 for more information.

1. HDU14 requires heavy-hex anchor nut to achieve tabulated loads (supplied with holdown).
2. HDU14 loads on 4x6 post are applicable to installation on either the narrow or the wide face of the post.

Typical HDU Tie Between Floors

## LOADING ON SOUTH HOUSE WALLS:

### NEW ROOF LOAD:

$$\text{DEAD LOAD} = 15 \text{ PSF} \times 13.5\text{ft} = 203 \text{ PLF}$$

$$\text{SNOW LOAD} = 25 \text{ PSF} \times 13.5\text{ft} = 338 \text{ PLF}$$

### NEW FLOOR LOAD:

$$\text{DEAD LOAD} = 15 \text{ PSF} \times 7\text{ft} = 105 \text{ PLF}$$

$$\text{LIVE LOAD} = 40 \text{ PSF} \times 7\text{ft} = 280 \text{ PLF}$$

### EXISTING FLOOR LOAD:

$$\text{DEAD LOAD} = 15 \text{ PSF} \times 7\text{ft} = 105 \text{ PLF}$$

$$\text{LIVE LOAD} = 40 \text{ PSF} \times 7\text{ft} = 280 \text{ PLF}$$

### NEW & EXISTING WALL DEAD LOAD:

$$\text{DEAD LOAD} = 10 \text{ PSF} \times 16\text{ft} = 160 \text{ PLF}$$

### TOTAL LOADS:

$$\text{DEAD LOAD} = 203 + 105 + 105 + 160 = \mathbf{573 \text{ PLF}}$$

$$\text{LIVE LOAD} = 280 + 280 = \mathbf{560 \text{ PLF}}$$

$$\text{SNOW LOAD} = \mathbf{338 \text{ PLF}}$$
