Re: 2502-028

Hi Gareth - I have uploaded the geotechnical response and calculations per Michelle's letter dated Jan 28. The geotechnical engineer has indicated that it would be best to get some resolution on these technical items prior to finishing the structural engineering. To that end, he has requested that if further substantive questions do emerge that perhaps a meeting could be arranged to work through any lingering issues.

In addition to the geotechnical engineer's comments, I wanted to note that the topo layer didn't print on my last site plan and that has been updated. Also, if the reviewer could use A-1 as the controlling document for review of wall heights I will have the structural engineer follow that for final grades.

Thanks! – Chris
