

## **RESPONSE TO PUBLIC COMMENT:**

In reference to CAO25-018 see notes below in bold:

1. The concerned property had dense vegetation and collected water in a swale during rainy weather conditions prior to removing them for construction. We would like to ensure that adequate water drainage methods are implemented (pump, pipes, landfill, geoinspection, etc) to prevent water logging, run off to neighboring properties and maintain structural integrity. **GEOTECH REPORT AND PLANS FROM A CIVIL ENGINEER HAVE ALREADY BEEN PROVIDED TO THE CITY OF MERCER ISLAND TO ADDRESS STORMWATER CONVEYANCE. THERE IS NO PROPOSED RUNOFF TO ADJACENT PROPERTIES.**
2. Provide retaining wall as concerned property is not at same ground level as adjoining property which has driveway adjoining it. **NOT RELEVANT TO CAO25-018. SEE APPROVED BUILDING PLANS WITH RETAINING WALL LOCATIONS**
3. Provide visually appealing landscaping and green cover as existing forested space has been removed for construction, and faces our entrance. **NOT RELEVANT TO CAO25-018 THERE WILL BE A RETAINING WALL WITH A FENCE ALONG THE PROPERTY LINE**
4. Provide temporary fencing during the period of construction to ensure pets and children are not injured or accidentally hurt. **NOT RELEVANT TO CAO25-018**
5. Provide construction plans, schedule and timeline to plan for associated construction related noise - as we have home offices and one of us works from home. **NOT RELEVANT TO CAO25-018. SEE CMP AND SCHEDULE UPLOADED**
