This project proposes the construction of approximately 135 linear feet of cast-in-place concrete retaining walls to address slope stability and erosion control on a property located within a mapped steep slope critical area. Approximately 22 linear feet of the retaining wall will be located within the watercourse buffer setback. Integrated stairs will be installed at the ends of each wall segment to facilitate safe slope transitions. The project also includes the installation of approximately 95 square feet of uncovered IPE decking.
